ORANGE INTERNSHIP

PROJECT BRIEF.

Prepared for the Orange Internship Programme · Circo Digital Academy

INTRODUCTION

As part of the Orange Internship Program, each Circle has been assigned a unique Project Brief designed to simulate a real-world business or organizational challenge. These project briefs serve as the foundation for the collaborative work that interns will undertake throughout the duration of the program.

Each project has been carefully developed to provide participants with the opportunity to apply their technical knowledge, strengthen their professional skills, and experience the dynamics of working within a cross-functional team. By solving practical problems, interns will gain hands-on experience in project execution, communication, collaboration, problem-solving, and product delivery competencies that are essential in today's remote and technology-driven workplace.

This document outlines the project brief assigned to each Circle, including the project name, who it's for, and project objectives. Each Circle is expected to approach its project with professionalism, creativity, accountability, and a user-centered mindset while working collaboratively to deliver a solution that addresses the identified challenge.

We encourage every team to view this project not merely as an internship assignment, but as an opportunity to build real-world experience, demonstrate their capabilities, and develop solutions that create meaningful impact.

Circle Name: **Ignite-circle**

Project Name **ExamPrep AI**

AI-Powered JAMB / WAEC Practice & Study Planner

The Problem.

Multiple applicants described students who study hard but cannot identify their weak topics, and want practice questions and a study plan tailored to JAMB or WAEC exam patterns rather than generic study materials.

Who It's For

Senior secondary school students preparing for JAMB or WAEC.

Project Brief / Objective

Build a focused practice-question app that tracks a student's quiz performance by topic and recommends what to revise next, alongside a simple study schedule.

MVP Scope — Build This

- Practice quiz flow for a chosen subject with a bank of past-style questions and instant scoring.
- Per-topic performance summary showing strong vs. weak areas based on quiz history.
- Simple study plan generator suggesting which topics to revise next based on weak areas.
- Basic streak/progress tracker to encourage consistent use.

Explicitly Out of Scope for the 6-Week Sprint

Full AI-generated tutoring conversations, voice/video lessons, school-wide rollout with teacher accounts.

Learning Outcomes by Circle Role

Role	What success looks like
Product Manager	Translate the ExamPrep AI brief into a clear, defensible MVP scope and say no to good ideas that don't fit the timeline directly practising time management and excellence in delivery by shipping a small, working product rather than an ambitious, unfinished one.
Brand Designer	Design a usable flow for a non-technical, possibly low-data or low-literacy user, communicating design rationale clearly to the rest of the Circle and incorporating feedback without becoming defensive building self-confidence and communication skills.
Frontend Developer	Build the user-facing screens against a shifting brief, flag blockers early to the PM rather than going quiet, and reconcile design intent with technical constraints practising proactive communication and conflict resolution.
Backend Developer	Design a simple, reliable data model and API for the core MVP flow, disclose technical trade-offs honestly to the team rather than hiding them to hit the deadline, and support teammates who are blocked practising integrity in delivery and team work spirit.
Data Analyst	Define what success looks like for ExamPrep AI and build a simple way to track it, using idle time productively to surface insights the team hadn't asked for, practising initiative.
